Gwalior, Madhya Pradesh, India

Summary

I am a passionate web developer and IoT enthusiast, committed to honing my skills in programming and software development. Currently, I am pursuing my engineering degree in Computer Science Engineering at Amity University Gwalior, where I am gaining a strong foundation in computer science and engineering principles.

As a project contributor at Codeate, a web development company, I create amazing web projects and learn emerging technologies of the web. I am proficient in a wide array of technologies, including HTML, CSS, JavaScript, Reactjs, Nodejs, Expressjs, MongoDB, and React-Redux. I have experience in building responsive and dynamic web applications that deliver exceptional user experiences. I have also completed the Meta Frontend Developer Program at Coursera, enhancing my expertise in frontend technologies.

I am fascinated by the potential of IoT, and I actively explore its applications and experiment with devices, protocols, and platforms to create smart and connected systems. I am also eager to delve into the realms of Artificial Intelligence, Machine Learning, and Data Science, and I am currently exploring these fields and aspiring to apply data-driven insights to solve complex problems.

I have achieved multiple accolades for my web development and problem-solving skills, such as 5# in C++, 5# in C, 4# in SQL, 4# in Java, and 4# in Python on Hackerrank, solving 300+ problems on GeeksforGeeks, leading the victorious team at the AmiHacks2k24 hackathon, and accomplishing 2nd Runner-up at Web Wonders Hackathon.

I am eager to collaborate on exciting projects in web development, IoT, AI, ML, and data science. I am open to networking and connecting with professionals and organizations to explore new

opportunities and contribute meaningfully to impactful projects. Let's connect and explore possibilities together!
